

Juniper

JN0-648 Exam

Juniper Enterprise Routing and Switching Professional (JNCIP-ENT) Exam

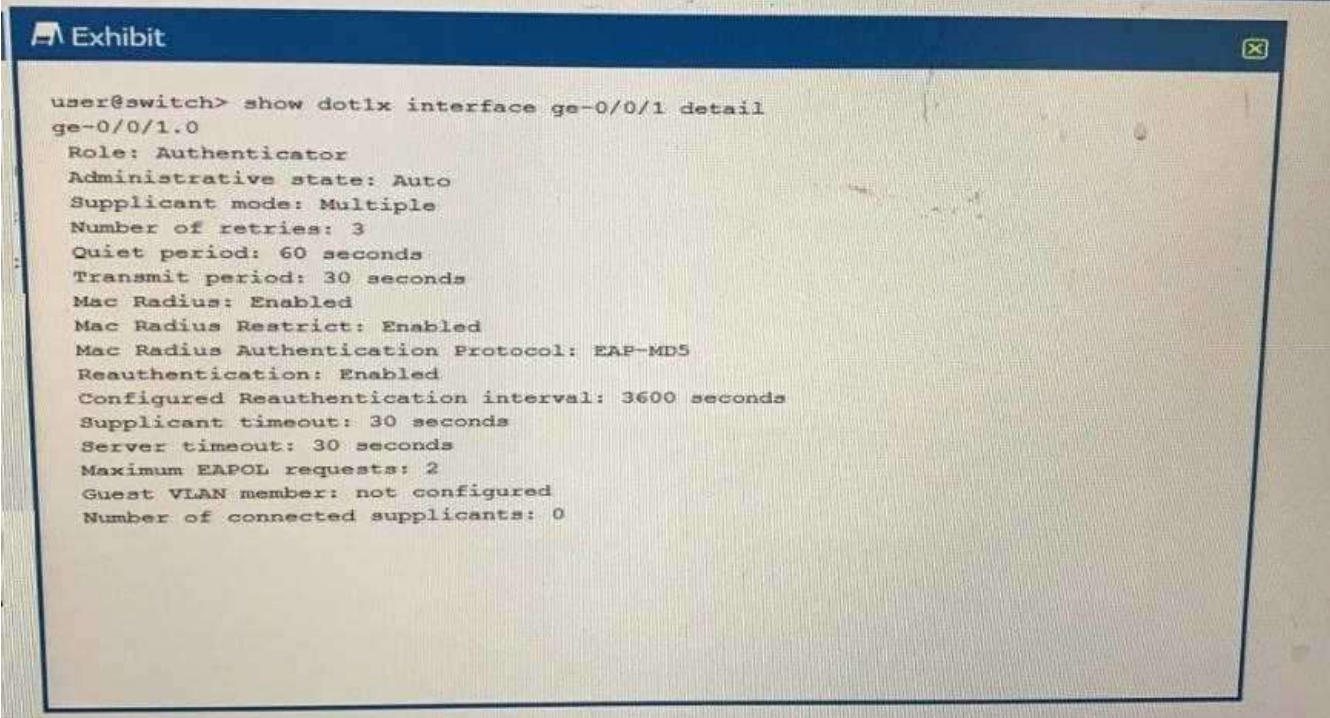

**Questions & Answers
(Demo Version – Limited Content)**

Thank you for Downloading JN0-648 exam PDF Demo

Version: 5.0

Question: 1

Exhibit:

```
user@switch> show dot1x interface ge-0/0/1 detail
ge-0/0/1.0
Role: Authenticator
Administrative state: Auto
Supplicant mode: Multiple
Number of retries: 3
Quiet period: 60 seconds
Transmit period: 30 seconds
Mac Radius: Enabled
Mac Radius Restrict: Enabled
Mac Radius Authentication Protocol: EAP-MDS
Reauthentication: Enabled
Configured Reauthentication interval: 3600 seconds
Supplicant timeout: 30 seconds
Server timeout: 30 seconds
Maximum EAPOL requests: 2
Guest VLAN member: not configured
Number of connected supplicants: 0
```

Which two statements are true about the 802.1X output shown in the exhibit? (Choose two.)

- A. EAPoL traffic will not be sent out of the use ge-0/0/1 interface
- B. EAPoL traffic will be sent out of the ge-0/0/1 interface.
- C. The supplicant is authenticated using 802.1X
- D. The supplicant is not authenticated using 802.1X

Answer: BD

Question: 2

You receive the same 100.200.0/16 route from all four ISPs to which you are connected. Referring to the exhibit, which ISP's route will be selected as active?

	AS-Path	MED	Local Preference	Origin
ISP-A	100 200 1	50	150	?
ISP-B	3000 1500	50	100	E
ISP-C	5000 4000	50	100	I
ISP-D	1000 7000	50	100	I

- A. ISP-A
- B. ISP-B
- C. ISP-C
- D. ISP-D

Answer: A

Question: 3

Exhibit:

```

[edit interfaces]
user@AS-1# show
ge-0/0/1 {
    unit 0 {
        family ethernet-switching {
            interface-mode trunk;
            vlan {
                members vian-pr1;
            }
        }
    }
}
ge-0/0/6 {
    unit 0 {
        family ethernet-switching {
            interface-mode access;
            vlan {
                members hr;
            }
        }
    }
}
ge-0/0/7 {
    unit 0 {
        family ethernet-switching {
            interface-mode access;
            vlan {
                members executive;
            }
        }
    }
}
[edit vlans]
user@AS-1# show vlans
vian-pr1 {
    vlan-id 100;
    community-vlans { executive hr };
}
executive {
    vlan-id 20;
    private-vlan community;
}
hr {
    vlan-id 30;
    private-vlan community;
}
    
```

```

[edit interfaces]
user@AS-2# show
ge-0/0/1 {
    unit 0 {
        family ethernet-switching {
            interface-mode trunk;
            vlan {
                members vian-pr1;
            }
        }
    }
}
ge-0/0/6 {
    unit 0 {
        family ethernet-switching {
            interface-mode access;
            vlan {
                members hr;
            }
        }
    }
}
ge-0/0/7 {
    unit 0 {
        family ethernet-switching {
            interface-mode access;
            vlan {
                members executive;
            }
        }
    }
}
ge-0/0/10 {
    unit 0 {
        family ethernet-switching {
            interface-mode trunk;
            vlan {
                members vian-pr1;
            }
        }
    }
}
[edit vlans]
user@AS-2# show vlans
vian-pr1 {
    vlan-id 100;
    community-vlans { executive hr };
}
executive {
    vlan-id 20;
    private-vlan community;
}
hr {
    vlan-id 30;
    private-vlan community;
}
    
```

You recently implemented the configurations shown in the exhibit. After committing these changes,

the community devices connected to AS-1 are not able to communication with the appropriate community devices connected to AS-2.

What must be to allow these community devices to communicate?

- A. You must configure to allow the ge-0/0/1 interface on AS-1 as the inter-switch.
- B. You must configure the ge-0/0/10 interface on AS-1 as the inter-switch link.
- C. You must configure the ge-0/0/1 interface on both switches the inter-switch links.
- D. You must configure an isolation VLAN ID under the vlan-pri vlan on the AS-2 switch.
- D. You must configure an isolation VLAN ID under the vlan-pri VLAN on both switches.

Answer: C

Question: 4

Packets enter a Juniper device and are classified as best effort. During the processing of the packet, the classification of the packets is changed to expedited forwarding by a multi-field classifier. The device is using the default CoS policies

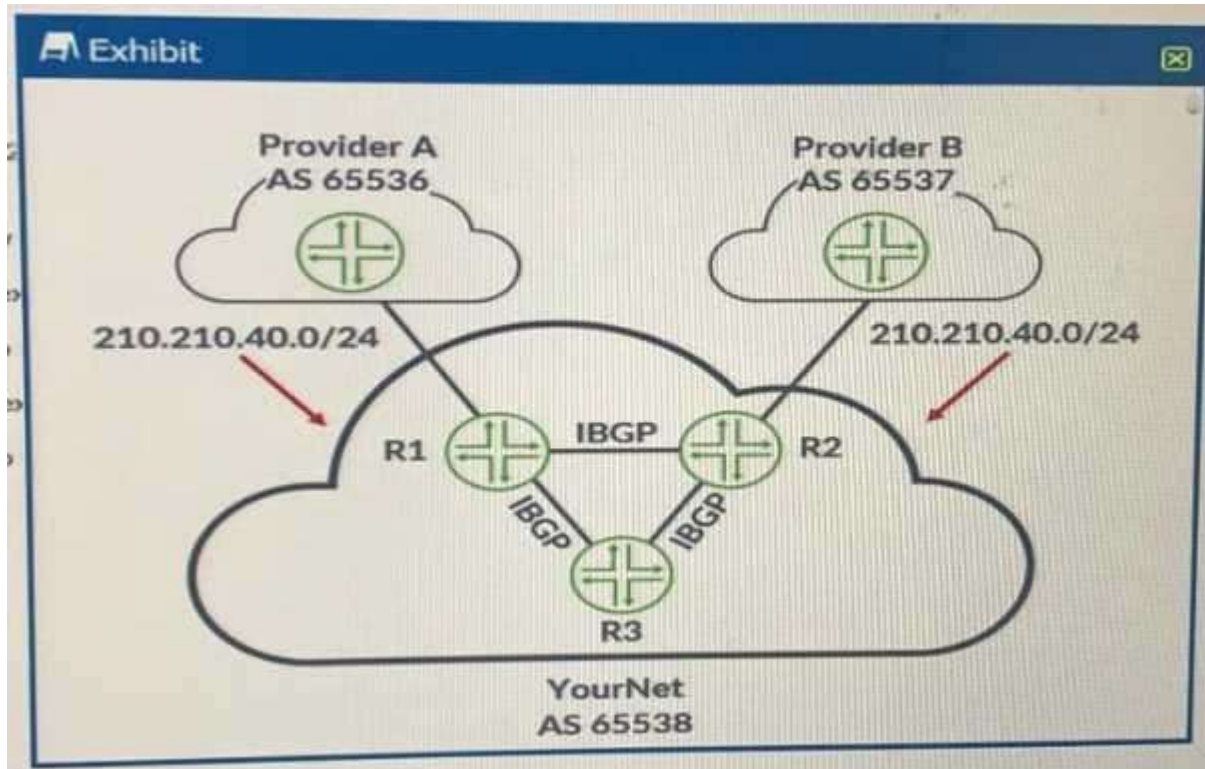

Which statement is true in this scenario?

- A. The packet is forwarded according to the new packet classification, and the DSCP bits are rewritten to the new class.
- B. The packet is forwarded according to the new packet classification, and the DSCP bits do not change.
- C. The packet is forwarded according to the original packet classification, and the DSCP bits do not change.
- D. The packet is forwarded according to the original packet classification, and the DSCP bits are rewritten to the new class.

Answer: B

Question: 5

Exhibit:

YourNet is learning the 210.210.40.0/24 route from Provider A and Provider B. YourNet would like to forward traffic destined to the 210.210.40.0/24 network using Provider B. Referring to the exhibit, how would you accomplish this task?

- A. Add the well-known no-export community to the routes learned through R2.
- B. Apply an export policy to R1's IBGP peers to set a higher local preference.
- C. Add the well-known no-export community to the routes learned through R1.
- D. Apply an export policy to R2's IBGP peers to set a Their local preference.

Answer: D
